THE NETHERLANDS

You are invited to experience the plight of our fragile planet and its changing environments, in a totally new way - on the giant screen in cutting-edge 3-D and 2-D. Join respected American television journalist Walter Cronkite on an investigative journey covering three of the most pressing environmental issues of our time; global warming, ocean habitat depletion/destruction, and deforestation.

Produced in association with The Netherlands chapter of the Worldwide Fund for Nature (WWF), known in the U.S. and Canada as the World Wildlife Fund, SOS PLANET takes you to the heart of the most environmentally challenged areas of our planet. The giant screen will immerse audiences of all ages in the urgent message of the film as they experience engaging animals coping with the changing conditions of their habitats; changes resulting from mankind's overuse of our planet's finite resources.

SOS PLANET both amazes and informs as the cause-and-effect of each of the three aforementioned environmental conditions is highlighted and explained through the magic of state-of-the-art computer generated imagery. The giant screen presentation of SOS PLANET provides audiences with a unique movie-going experience that offers new views on several areas of concern often glossed over by traditional media outlets.

With the vast wealth of communication tools at our disposal, one important message continues to demand our attention - the necessity for all of us "to preserve the abundance and diversity of life on Earth." In this message lies the key to our collective future.

SOS PLANET One World. One Future.

Now Available in 3-D and 2-D from nWave Pictures Distribution
